

When the patient  
lashes out against "them"—

**THORAZINE®**

brand of chlorpromazine

quickly puts an end to his  
violent outburst.

Thorazine® is especially effective when the psychotic episode is triggered by delusions or hallucinations.

At the onset of treatment, Thorazine's combination of antipsychotic and sedative effect provides both emotional and physical calming. Aggressive or destructive behavior is rapidly controlled.

As therapy continues, the initial sedative effect gradually disappears. But the antipsychotic effect continues, helping to clear or steady delusions, hallucinations and confusion, while keeping the patient calm and cooperative.
